SHAKIL AHMED	17-34405-1

## Online Worker Service Provider

### Introduction:

In our daily life we faces different types of worker problem, for that most of the time we have to search worker manually, sometimes workers are not available that moment. In this era most of the things peoples want to get everything by sitting in house. Our project goal is we will provide workers instantly when customer needed.

### Background Study

[1] <https://www.handy.com/>

[2] <https://www.taskrabbit.com/>

[3] <https://www.screwit.co/>

Given websites we saw that all is very good online based worker hire service. We review these and got this encouragement from given websites to do such things to service provide in our country because, there is no flexible online hire worker service like these. We also get the idea to add extra service like, guard, daily labor services that are not in together in each mentioned websites. If we develop this project we will able do service like those websites and it will be easy for our country people to get service and easily connect with different types of workers by one website.

### Requirement Analysis:

- **User Category:**

There are 4-types of Users here. They are:

- Admin
- Customer
- Employee
- Workers

## **Online Worker Service Provider**

### **Impact of this Project:**

Online service provider systems are new aids of online market. Customer have their own requirements and employee have to find all the ways, methods and resources to meet their requirements. People can easily find and hire worker for their needs in this system. So that, customer fulfil their needs in an easy way. Our worker are experience, trained, certified and police verified .Hence they are trusted & reliable. So we make sure customer security. Customer can hire workers online with other requirement and payment via cards or cash on delivery or mobile banking.

### **Limitations and Possible Future Improvements:**

Limitations:

1. This service available only for local area.
2. Some department are not available 24/7.
3. Customer can't connect with worker without online system.

Future Improvements:

1. In future we will try to connect all area for service.
2. We will add different work department by based on public demand.
